**SUMMARY OF THE CLINICAL STUDY
ON
MALARIA PATIENTS TREATED WITH THE PREPARATION
VIUSID
IN
IVORY COAST**

MALARIA
(CASE STUDY)

Monotherapy of MALARIA with VIUSID

Number of Patients:	8	4 female 4 male
Ages:	4, 7, 14, 29, 31, 32 and 37 years	
Duration of Treatment:	3 - 5 days	
Therapy:	monotherapy with VIUSID	
Dose:	3 sachets of VIUSID per day	

CONCLUSIONS

- **87.5 % of the patients (7 patients) completely recovered within 1, 2, 3 or 4 days.**
- 12.5 % of the patients (1 patient aged 31) had a favourable response only at the beginning of the treatment, approximately on the second day.
- fast relief of the symptoms
- intense increase of appetite
- quick disappearance of fever, headache, asthenia, etc.
- normal health condition
- good antiplasmodic activity

- As for side effects, only in the 7 year-old child there were observed some nausea.
